Your vowel space

The ten vowels of sung Russian, as your voice shapes them

Dann

A vowel you sang, measured in vocal fry.

A placeholder: where Ilya expects a vowel you have not sung yet.

Each coloured area reflects the neighbourhood where Ilya expects a vowel to resonate in a voice like yours. The lavender areas mark [ɪ], [ɨ], [a], and [ʌ]: Ilya can work out these four from your samples of the other six, or you can choose to sample them directly. Overlap between areas (where the colours blend) is normal.

The outline surrounds your sung vowels. It is dashed until all ten are sung.

Your readings

Vowel		f_{R1} Hz and note	f_{R2} Hz and note
i	cardinal-i	**296 Hz** D4 +14	**1705 Hz** G♯6 +45
e	close-e	**381 Hz** G4 −49	**1532 Hz** G6 −40
ɪ	smallcaps-i	**393 Hz** G4 +4	**1600 Hz** G6 +35
ɨ	velar-i	**404 Hz** G♯4 −48	**1100 Hz** C♯6 −14
ɛ	open-e	**577 Hz** D5 −31	**1311 Hz** E6 −10
a	bright-a	**711 Hz** F5 +31	**1113 Hz** C♯6 +7
ɑ	dark-a	**617 Hz** D♯5 −15	**1013 Hz** B5 +44
ʌ	turned-v	**616 Hz** D♯5 −17	**1167 Hz** D6 −11
o	Russian-o	**489 Hz** B4 −17	**826 Hz** G♯5 −10
u	cardinal-u	**346 Hz** F4 −16	**804 Hz** G5 +44

Zones along the first resonance: Bozeman, *Kinesthetic Voice Pedagogy*, 2nd ed. (2021), Figs. 8 to 10; for baritones, Bozeman, “Levels of Acoustic Registration” (kenbozeman.com). The second resonance’s range: Bozeman, *Practical Vocal Acoustics*, 2nd ed. (2025), p. 35. Placeholder values: the centre of each zone for the first resonance, and Mitton (2020), Table 5.3, scaled to your voice type, for the second. Each zone’s width along the second resonance is Ilya’s own estimate.
